

Your history comes with you.

Years of inspection records on your current platform? Keep every one. We take your existing reports as the starting point and build forward — nothing is lost, nothing restarts from zero.

Switching inspection provider shouldn't mean abandoning your paper trail. With AssetProof, it doesn't.

1

Share your last report

Send us the most recent inspection report for the property — PDF or online link. That's all we need to start.

2

It becomes the baseline

Every item and defect already on record is carried into our register, each one referenced back to your original report.

3

Our specialist walks it

A quick photo & video walkaround by our specialist. Every item is checked against the previous record.

4

You get the full picture

A Continuity Report: what's unchanged, what's new, what's been fixed — plus our complete document set.

Your deposit trail stays intact

A current tenant's move-in report remains the official baseline for their lease. We **extend** that record — we never replace it. When that tenant moves out, the comparison is clean and defensible.

No big switch-over

Move each property across at its next tenant changeover. Keep your current system for maintenance and admin as long as you like. There's zero risk to your existing portfolio.

What you gain from the first visit

- ✓ Photographic Condition Inspection — every surface, every room
- ✓ Full Inventory & Condition Register, items counted
- ✓ Re-Walk Comparison Sheet for the next visit
- ✓ Owner Report and indicative opinion of value
- ✓ Insurance Evidence Pack on request

Whole portfolio? We take the archive.

Your inspection data belongs to you. Request a full export from your current provider and we'll bring the entire archive across — property by property, cross-checked and referenced.

Every item we produce is cross-checked against the source photographs before delivery, with a free first correction.

"Nothing you've already documented is lost. We start from it — and take it further."

Send us one property's last report. We'll show you the Continuity Report.
