

Development Monitoring & Drawdown Verification

Independent, evidence-based construction progress — a drone or video capture in, a lender-ready report out.

The blind spot

International lenders fund projects they never see. Today a local engineer's signature releases each tranche — a single point of trust, and sometimes of fraud. When completion is overstated, money is released against work that isn't there. The lender is thousands of kilometres away, relying on the word of the very party being paid.

What AssetProof does

We turn a periodic drone or video capture of the site into a structured, tamper-resistant progress report, measured against the project's **specification and build programme**. It tells the lender what is **actually** built, where it deviates from plan and budget, and whether to **release or hold** the next drawdown — every percentage backed by dated, sealed evidence.

Where we sit — between the machine and the surveyor

AI progress tech

DroneDeploy, OpenSpace, Buildots: % complete from imagery. Data only — no independent report, no funding decision, no accountability to the lender.

AssetProof

Independent evidence + a lender-ready monitoring report + a clear drawdown recommendation. The objectivity of the machine with the accountability of a report.

Monitoring surveyor / QS

Certifies the final figure and signs it. We supply the evidence and completion analysis beneath — faster, remote, and independent of the site.

Why a lender trusts it

Independent

Remote and unconflicted — not the local engineer who is paid by the project.

Chain of custody

Sealed capture, server-stamped and tamper-evident — evidence, not a claim.

Evidence-grade

Every percentage tied to dated imagery of the actual work, against the spec.

Fast & global

A report within days of the flight, anywhere a drone or camera can reach.

What we deliver

Initial Baseline Appraisal (spec, programme, budget & contractor benchmark) · **Interim Progress & Drawdown Reports** (verified % complete per element, variance to plan & budget, release/hold recommendation) · **Deviation & exception alerts** · **Final completion evidence pack**.

Evidence from us, certification from the professional

AssetProof provides the independent evidence and completion analysis — an opinion and a defensible point of departure. Where a certified figure is required to release funds, we pair with a licensed quantity surveyor or engineer who signs the number. We evidence; the professional certifies — the same discipline as our property valuations.

Programme-based pricing, scoped to the development and the inspection cadence. A remote, evidence-based monitoring layer that closes the blind-trust gap between the lender and the site.

See what actually got built — before you release the next tranche.
